

YOUR CODING AUTHORITY

Coding Audits

Measure your coding quality performance with confidence.

Whether you need to validate charges, audit denied claims, or examine your depth of coding for entitled reimbursement capture, KIWI-TEK delivers the results you need quickly and accurately.

Our audit strategy is tailored to your specific goals and objectives. We can audit coders individually, examine a specific provider or take a sample of an entire specialty type. Our goal is to identify root causes for your coding errors and establish a benchmark for coding accuracy. Additionally, by pinpointing the strengths and weaknesses of your coding team, we can provide relevant educational materials and help to enhance your coders' knowledge and accuracy.

KIWI-TEK takes proactive measures to address improper coding issues on the front end and prevent denied claims. Here are just a few ways we partner with clients:

- **Build a Dedicated Edits and Denials Team**
- **Provide Ongoing Training and Education**
- **Identify Top Denials and Work to Prevent Them**

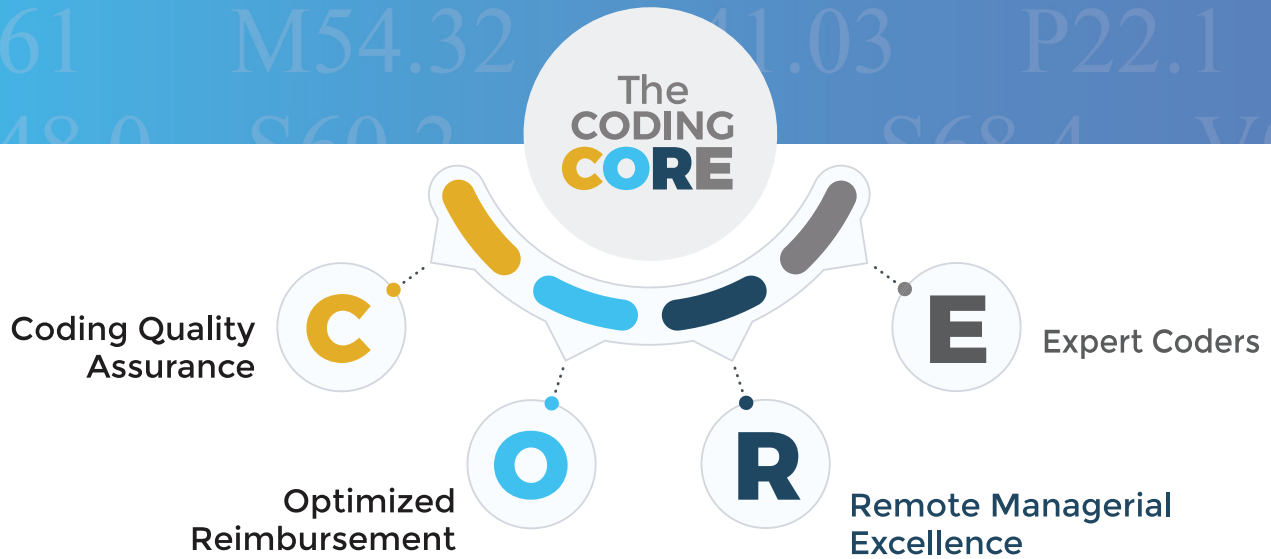

Implementing a consistent audit program is beneficial to the organization. As audits become a routine part of the coding workflow, coders will no longer perceive the process as a negative interruption. In fact, coders look forward to receiving consistent feedback to promote continual learning and improvement.”

Sarah Humbert
RHIA, ICD-10 AHIMA Certified Trainer
Vice President of Coding Operations,
KIWI-TEK

If you would like to maximize your organization's reimbursement by ensuring your coders are capturing all the specificity that ICD-10 allows, contact KIWI-TEK. Visit www.kiwi-tek.com

Whether you're building a new coding team, starting a new CDI program or taking a fresh look at coding audits, none of it is possible without correct coding at the core.

Denial Prevention

As the volume of coding denials steadily increases, you need a proactive approach to manage and prevent denials rather than accepting them and writing them off.

Understanding the root causes of coding denials is essential to effective management and proactive prevention.

- Coding changes (new CPT or ICD codes)
- Varying payer guidelines
- EHR upgrades, conversions, and entire system transitions
- Revenue cycle outsourcing

Reporting

KIWI-TEK not only provides accuracy scores from the audit, we also provide a detailed analysis on each coding decision as well as supporting education materials. This reporting can also be tailored to your specific goals and objectives for the audit.

Our team of professionals can conduct an audit for you, or help you set up an internal audit program that meets your organization's needs. Visit www.kiwi-tek.com
