

5 POINTS ON: Coding Challenges with EHRs

A recent survey of HIM leaders confirms what KIWI-TEK coding experts already know—electronic health record implementations trigger medical record coding backlogs. Coding challenges during EHR implementations and integrations were cited as the #1 challenge by 35% of HIM leaders surveyed with specific concerns focused on data integrity, new coding workflows, diverse systems and technology changes.¹

When your coding department is facing an EHR change, include these five strategies in your project plan.

Coding backlogs impact cash flow and financial health. Protecting productivity and workflow during EHR implementations is a critical executive concern.
